

ELECTRIC VEHICLE CHARGING INFORMATION

The following is a checklist of items for participating in our program.

- Do you have a 110v, GFI protected outlet available in your parking lot?

- If you need to have one installed, contact a licensed electrician, and have them add a dedicated, GFI protected 110V (15A or ideally 20A) circuit.

- If you want to be 220v ready, have a dedicated 220v GFI protected 30A circuit run, but wait for the J1772 plugs to be available! Contact us for more information.

- If you are unsure of the best location or the installation, email info@txunplugged.com and we will help!!

- Install an "Electric Vehicle Charging" sign. Ask us, we will provide you one for FREE!

- Register your location at the txunplugged.com site by emailing the following information
 - Your Address
 - Phone (optional)
 - Describe your business or location, include a small photo or ad if you like
 - Describe what type of and how many outlets you have available
 - Any message or special offers to owners of Electric Vehicles?

If you have any questions, email us at info@txunplugged.com
